Spraying: Jet assemblies and nozzles

DESCRIPTION

These jet assemblies are used for all types of spraying applications, cooling lubricating or process wetting. Three versions are available, flexible, rigid extension or manifold jet assembly. Basic model is equipped with standard nozzle B 136. For specific spray pattern, it must be specified when ordering. Liquid flow discharge is adjustable with a needle screw located on the head.

Check valve B 6999 can be mounted on each jet to prevent drainback during shutdown and to permit more rapid response at jet tip when unit is actuated. Manifold jet assembly comprise an entry jet section, an end jet section and 3 intermediate jet sections.
